174256 175416 contig of 1161 bp in length.
• NOTE: This is a "working draft' sequence. It currently consists of 22 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.
• This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

The invention relates to isolated nucleic acid molecules (I) encoding human leucine-rich repeat small intestine I (HERRSI) polypeptides. The nucleic acid molecules and polypeptides are useful for preventing. The nucleic acid molecules and polypeptides are useful for preventing. Treatring and ameliorating medical conditions, such as proliferative, gastrointestinal, renal, neural, or reproductive disorders or disorders of directly or indirectly. They are also useful for treating, preventing and/or diagnosing diseases, disorders and/or conditions of: immune system of particle or indirectly. They are also useful for treating, preventing and/or diagnosing diseases, disorders and/or conditions or inhibiting the proliferation, differentiation, or mobilisation of immune cells, haematopoietic cells e.g. thrombocytopenia, anemna; immunologic deficiery syndromes, e.g. human immune deficiercy virus (HIV) infection, HTLV-BLV infection; blood coagulation disorders, e.g. arterial thrombosis; autoimmune disorders, e.g. Addison's disease, myasthenia gravis; asthma or allergic reactions; infiammatory conditions, e.g. chronic prostatitis, sepsis; proliferative disorders, e.g. acadiovascular disorders, e.g. measies, mumps, c.g. funcington's chorea; infectious diseases, e.g. measies, mumps, and infiammaton, or viral, baccerial, and fungal infections, and presentation, or other processes such as boosting immune responses.

to express a protein which affords protection against intracellular of parasites and also for diagnosis of disorders associated with expression of GCREC. GCREC is also useful for generating hybridisation probes useful for mapping the naturally occurring genomic sequences and to create to knowthin humanised animals (pigs) or transgenic animals (mice or rats) to complete the match the match is and cancer); cancer (breast, badder, bone marrow, brain, oterus cancer, leukaemia, adenocarcinoma, lymphoma, melanoma and myeloma) returns cancer, leukaemia, adenocarcinoma, lymphoma, melanoma and myeloma; cancer, leukaemia, adenocarcinoma, lymphoma, melanoma and myeloma; cancer, leukaemia, adenocarcinoma, lymphoma, melanoma and myeloma; carcinota disorders (epilepsy, stroke, Alzheimer's, Huntington's, cardiovascular disorders (angina pectoris, hypertension, atherosclerosis, congestive heart failure); central corpussion, atherosclerosis, congestive heart failure); csophagea; cyprosis, pancreatitis, gastric carcinoma, anorexia, nausea, abdominal angina, confissam, gastrictained disorders (acquired immunodeficiency syndrome (AIDS).

Confisson's diseases, allerges, anaemia, asthma, diabetes melitus, atopic dermatitis, giomerulonephitis, Grave's disease, osteoarthritis, consentative colitis, bacterial, fungal, parasitic, protozoal and helminchi infections) and metabolic disorders (obesity, osteoporosis, viral infections) and metabolic disorders (obesity, osteoporosis, viral infections).

                                                                                                                                                                                                                                                                                               NOVX polypeptides and polynucleotides, useful for preventing or treating a disorder associated with aberrant NOVX expression or activity e.g., cancer, hypertension, atherosclerosis, cardiomyopathy or bronchial asthma
                                                                                                                                                                                                                                   Ξ
                                                                                                                                                                                                                                                                                                                                                                                             cytostatic, cardiant, antiarteriosclerotic, antiarthmatic and hypotensive activity. Pharmaceutical compositions comprising the NOVX proteins or nucleic acid molecules or NOVX antibodies areful for preventing or treating a discrete associated with aberrar NOVX expression or activity e.g. cancer, hypertensich, atherosclerosis, cardiomyopathy or bronchial asthma. The products of the invention can be used for gene therapy or in a vaccine, ASU65041-ABU65218 represent the NOVX polypeptides encoded by ABX97008-ABX97185.

ATLAS-2 is related by homology to cytokine receptors and its gene is located on chromosome 11p15.5. ATLAS proteins, polynucleorides and antibodies are useful for treating/preventing conditions associated with an autoimmune disorder, immune disorder, T-lymphocyte-associated disorder, cell-proliferation disorder, cell differentiation disorder, and immune deficiency disorder and for screening for a modulator of

The properties of the properties of the projection of the properties of prophylactic treatment of diseases associated with cell proliferation of prophylactic treatment of diseases associated with cell proliferation (e.g. cancers, malignancies and tumours). The polynucleotides are useful in gene therapy, to detect ATLAS menous to genetic lesion in an ATLAS gene, to modulate ATLAS activity, to screen drugs or compounds that modulate ATLAS activity or expression and to treat disorders characterised by insufficient or excessive production of ATLAS protein forms that have decreased or abstract activity compared to ATLAS wild type protein and in tissue typing to identify individuals. The antibodies are useful for localisation, guantitation, isolation and detection of ATLAS and to monitor protein levels in tissue. ATLAS is useful for treating/preventing infection by inchythms, fertility or metabolism, affecting behavioural characteristics, and for providing analgesic effects. A host cell containing the polynucleotide is useful to produce non-human transgenic
   or of latency or predisposition to an immune disorder
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1851 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates the DNA and their encoded proteins, where the proteins contain at least one PYD (pyrin) domain. These can be used to treat diseases associated with impaired intracellular signal transduction, particularly inflammation such as psoriasis, arteriosclerosis, bacterial or viral infections (particularly meningitis and pneumonia), multiple sclerosis, rheumatoid arthritis, ashma, sarcoidosis, glomerulomphitis and osteoarthritis, and also Alzheimer's and Parkinson's diseases. The present sequence is a protein of the

The sequences ABABOR25-ABABOR374 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a trulebotide against the polypeptides, methods of detecting the nucleotides, antibodies against the polypeptides, methods of detecting the nucleotides, concludes against the polypeptides, methods of detecting the nucleotides, or polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence operated therepeutic applications. The polypeptides of the invention have been activities, and hence of the averaging activity; tissue growth activity; hence activity; immorphism activity; activin- cell proliferation or cell differentiation activities, sem cell growth factor activity; immorphism activity; activin- cell proliferation or metastasis.

Chemotactic or chemokinetic activities; paemoctatic, thrombotic or thrombolytic activities; acmoer cell proliferation or metastasis.

Chemotactic or chemokinetic activities, polypeptides and nucleotides of the invention are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Such conditions include cancers, haematopotetic disorders (e.g., myeloid or lymphoid cell disorders), chronic inflammatory conditions (e.g., asthma or arthitis), proliferation and stored with tissue resperation and variation and variations and ulcers), while those with immorphism for proveth proliferation and disorders (e.g., myeloid or lymphoid cell conditions, activity may be used to promote wound immorphism and fungal infections and ulcers), while those with prowth factor activity may be used to promote wound imminished the growth. For example, such polypeptides may be used to augment of repair of anyment of such and proved any proved by the cell growth factor activity may be used to burnes and allowed the p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 autoimmune disease or accidental damage. The polypeptides and nucleotides may also be used in the diagnosis of the above conditions, and in drug screening techniques. The present sequence represents a novel human polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                222
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AALSYLLEDGGVPRTAAGGVGTLLRGDAQPHSHLVLTTRFLFGLLSAERMRDIERHFGCM 300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    283 VPFVCWIVCTVLRQQLELGRDLSRTSKTTTSVYLLFITSVLSSAPVADGPRLQGDLRNJC 342
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RLAREGVLGRRAQFAEKELEQLELRGSKVQTLFLSKKELPGVLETEVTYQFIDQSFQEFL 402

receptors respond to arginine vasopressin. Isoreceptors have been described for both AVP and AII, this is consistent with their functional diversity. This recombinant receptor may be derived from may be used in the construction of vectors for the expression of the recombinant receptor. Fragments of the extracellular domain of the receptor are useful as immunopens for producing antibodies which neutralise the activity of the AII/AVPv2 receptor in vivo. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence represents a recombinant angiotensin II cAMP/vasopressin-
v2 (AII/AVPv2) receptor polypeptide. AII and AVP receptors are both
G protein-coupled receptors with diverse physiological roles. AII
receptors respond to the neurotransmitter angiotensin II whilst AVP

                                                                                                                                                                        09-AUG-2001
   The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB89040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adremal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis, (c) cardiovascular disorders such as mycocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.

Note: The sequence data for this patent did not form part of the printed specification, but was obsained in electronic format directly from "MIPO at ftp.wipo.int/pub/published_pot_sequences."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          177

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) and a dead be used in gene therapy and vaccine production. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polybudiceotides may be used in the prevention, diagnosis and proteins and polybudiceotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) colynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to provent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic artisen genomic conference from the present invention. ARK54942 to AAK54960 and AAM82169 represent invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           185

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention comprises the anino acid and coding sequences of human PYRIN proteins. The PYRIN protein and DNA sequences of the invention are useful for modulating and diagnosing stress-related, apoptopic and inflammatory responses. The PYRIN protein and DNA sequences are useful for treating: inflammatory disorders and immune system disorders (e.g. crohn's disease, reactive arthritis, multiple sclerosis, contact crohn's disease, reactive arthritis, multiple sclerosis, contact cardinal infections); cancer (e.g. leukaemia); autoimmune disorders (e.g. systemic lupus erythematosus and arthritis); and neurological protein and DNA sequences may also be used in screening assays.

The PYRIN protein and DNA sequences may also be used in screening assays, detection protein and detection disparance (e.g. diagnostic assays, clinical trials and pharmacogenomics) and transcription profiling. The present amino acid sequence represents a human PYRIN-8 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    611

               The present invention relates the DNA and their encoded proteins, where the proteins contain at least one PYD (pyrin) domain. These can be used to treat diseases associated with impaired intracellular signal transduction, particularly inflammation such as psoriasis, arterioscierosis, bacterial or viral infections (particularly meningitis and pneumonia), multiple sclerosis, rheumatoid arthritis, asthma, sarcoidosis, glomerulonephritis and osseoarthritis, and also Alzheimer's and Parkinson's diseases. The present sequence is a protein of the

The invention relates to human NBS-1 (nucleotide binding site) and PYRIN-1 protein and nucleic acids. NBS-1 and PYRIN-1 DNA, protein and the reathent of apoptotic and their modulators are useful in the treatment of apoptotic and inflarmatory disorders, cancer (leukaemia, melanoma, carcinoma); viral inflarmatory disorders, cancer (leukaemia, melanoma, carcinoma); viral inflarmatory disorders (SIB); immune-mediated glomentlonephritis, arthritis); neurological disorders (Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis (ALS), retinitis pigmentosa, Huntington's disease); aplastic anaemia, ischemata, meningitis, liver siseases. NBS-1 and PYRIN-1 DNA, protein and their modulators are also used for the treatment of inflammatory and immune disorders such as chronic inflammatory and immune disorders such as chronic inflammatory and immune disorders such as chronic inflammatory including multiple sclerosis, Grave's disease, allergy, asthma, HIV, tuberculosis and lepromatous process, the present sequence is human PYRIN-1 protein. Identification of compound that binds to polypeptide (for e.g. a FYRIN protein), useful for treating disorders associated with inappropriate apoptosis, for e.g. inflammatory disorder -

WFI; 2003-328763/31.

N-PSDB; ABX93556

Claim 1; Fig 4; 74pp; English

```
The invention relates to a new method for the identification of a compound that binds to a human PYRIN-1 (an apoptotic signalling molecule appearing as ABU08503) comprising contacting the polypeptide or a cell expressing the polypeptide or a cell expressing the polypeptide to a test compound and determining the polypeptide to a test compound and determining the effect of the test compound on the activity of PYRIN-1. In a similar manner, compounds are isolated which modulate the binding of PYRIN-1 to ASC (comprising testing the compounds against the pyrin binding domains of comprising testing the compounds against the pyrin binding domains of both PYRIN-1 and ASC (not defined)), modulate the activity of NP-kB (comprising testing the compounds against the pyrin binding of one test compound to the CC (comprising the binding of a test compound to the CC (comprising the binding of a test compound to the CC and absence of the LNR domain binding compound). The condidate the activation of NF-kB in a cell expressing ASC and PYRIN-1; in the presence of the LNR domain binding compound). The candidate of activity. The identified compound can be used to modulate the By modulators may be useful for treating an inflammatory disorder.

Also included is a method (MB) for identifying a modulate the By modulating the expression or activity of the polypeptide (PYRIN-1 and Societed associated with inappropriate apoptosis (inflammatory disease, insullin-dependent diabetes, multiple sile appears). Good assence of assase, insullin-dependent diabetes, multiple sole appropriate profile of sething the confunctivities, psoriasis, graft versus host disease, allergies, contact dermaticis, psoriasis, graft versus host disease, usthma, chronic obstructive pulmonary disease, allergies (e.g. food allergies), conjunctivities, habiting to medical infections such as HIV infection, and bacterial infections such as HIV infection, and bacterial infections such as entire and appropriate the part of the polyperial of the polyperial of the polyperial of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         119

The invention relates to identifying compounds, that modulate interaction between caspase recruitment domain (CARD)-7 and CARD-5. The method involves measuring the binding of CARD-7 and CARD-5 in the presence of the compound (an increase in the binding of CARD-7 to CARD-5 in the presence of the compound indicates that the compound in the absence of the compound indicates that the compound is a modulator of CARD-7. The absence of the compound indicates that the compound is a modulator of CARD-7-CARD-5 interaction). Modulators of CARD-7 and CARD-8 expression or activity can be used to treat or diagnose disorders such as cancers, bacterial or continue in the compound indicates that the compound indicates that the compound in the contraction of CARD-7 and careful or allowed in the contraction of card-7 and CARD-8 are useful as modulating agents in regulating a variety of cellular processes including cell growth and cell death. The present sequence represents the human CARD-7, an intracellular protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              711 LQP------CVETDXELLVCT 755

The HLRRNS1 polypeptide or the polynucleotide is useful for preventing, treating, or ameliorating a neural disorder or a disorder related to aberrant apoptosis modulation (either directly or indirectly), renal disorder, immune disorder (e.g. arthritis, asthma, acquired immunodeficiency syndrome (AIDS) or rheumatoid arthritis), haematopoletic, metabolic, reproductive, pulmonary or cardiovascular diseases, hyperproliferative disorders, neurodegenerative diseases (e.g. Alzhelmer's disease, Parkinson's disease or Huntington's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             py, and in
